EXPERIMENT 9

User Management and Role-Based Access Control

Insurance Claim Request & Processing Management – Zoho Creator

1. Aim

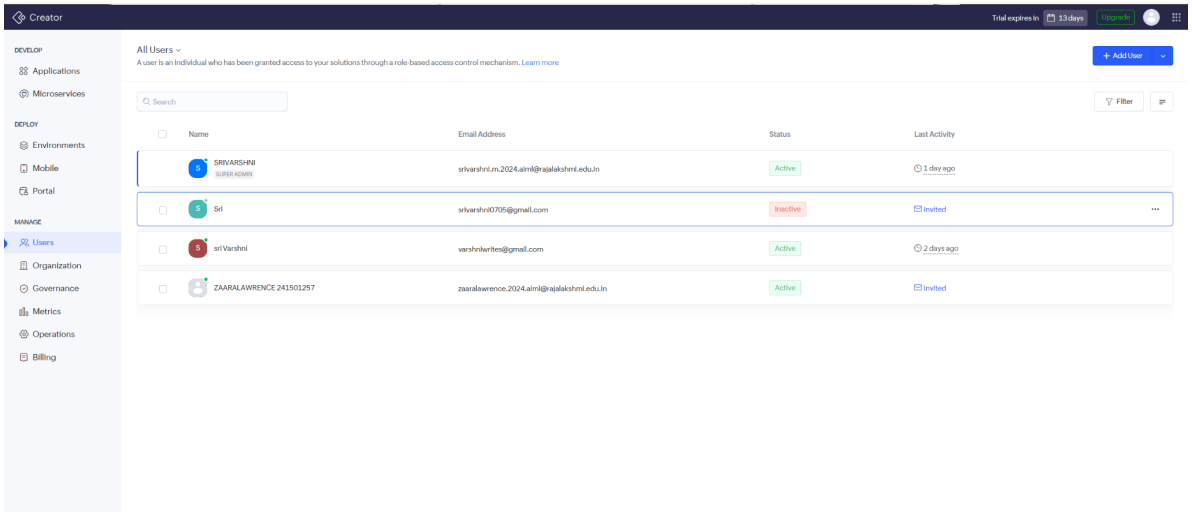

To manage users in Zoho Creator and understand role-based access control by viewing user accounts, their access status, and the administrative user-management interface.

2. Procedure

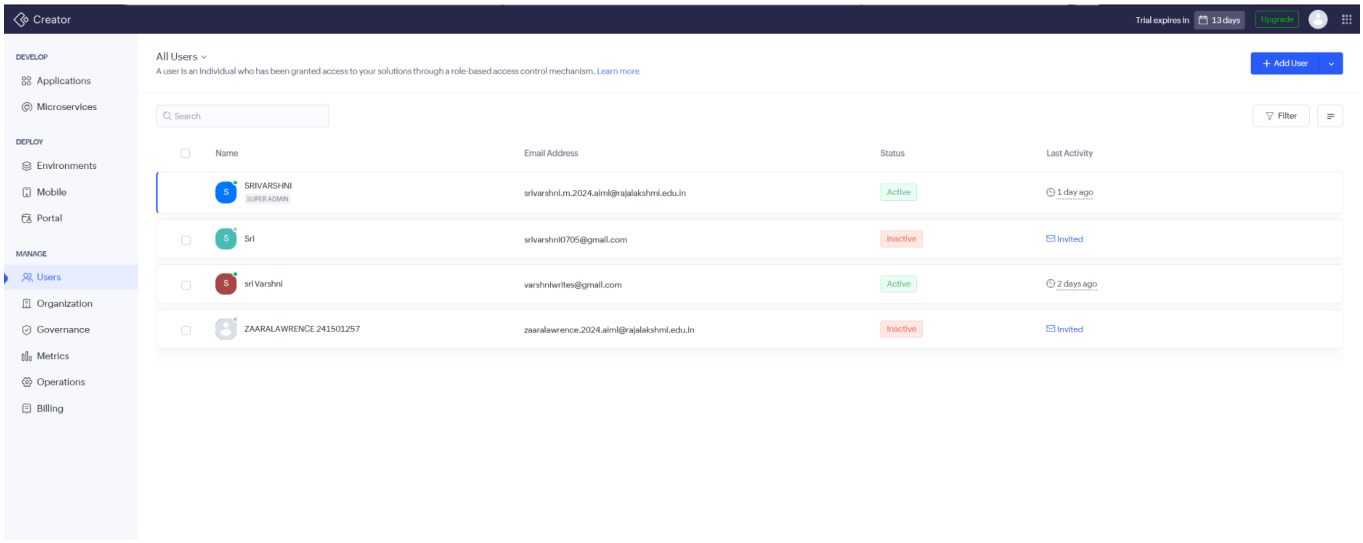

1. Sign in to Zoho Creator and open the required application or organization.
2. Navigate to the Manage section and select Users.
3. View the list of users displayed with their names, email addresses, status, and last activity.
4. Identify active and inactive users from the status column.
5. Use the Add User option to invite or add a user when required.
6. Review the available user-management options and confirm that access can be monitored through the Users page.
7. Capture screenshots of the user list and its status details for documentation.

3. Screenshots

Screenshot 1 – Zoho Creator Users page showing user names, email addresses, account status, and last activity.

Screenshot 2 – Zoho Creator Users page showing the user list and account statuses.

4. Result

The Users section in Zoho Creator was accessed and the user list was reviewed. User names, email addresses, active or inactive status, and last-activity information were visible. The user-management interface was demonstrated.

Note: The supplied screenshots show user management and account statuses. They do not show a specific role-permission configuration, so role-based access permissions should be configured and tested separately if required by the experiment.
