EXPERIMENT 6

WORKFLOW AUTOMATION USING DELUGE

AIM

To automate insurance claim processing in Zoho Creator using workflows and Deluge scripts.

PROCEDURE

1. Open the Insurance Claim Request application in Zoho Creator.

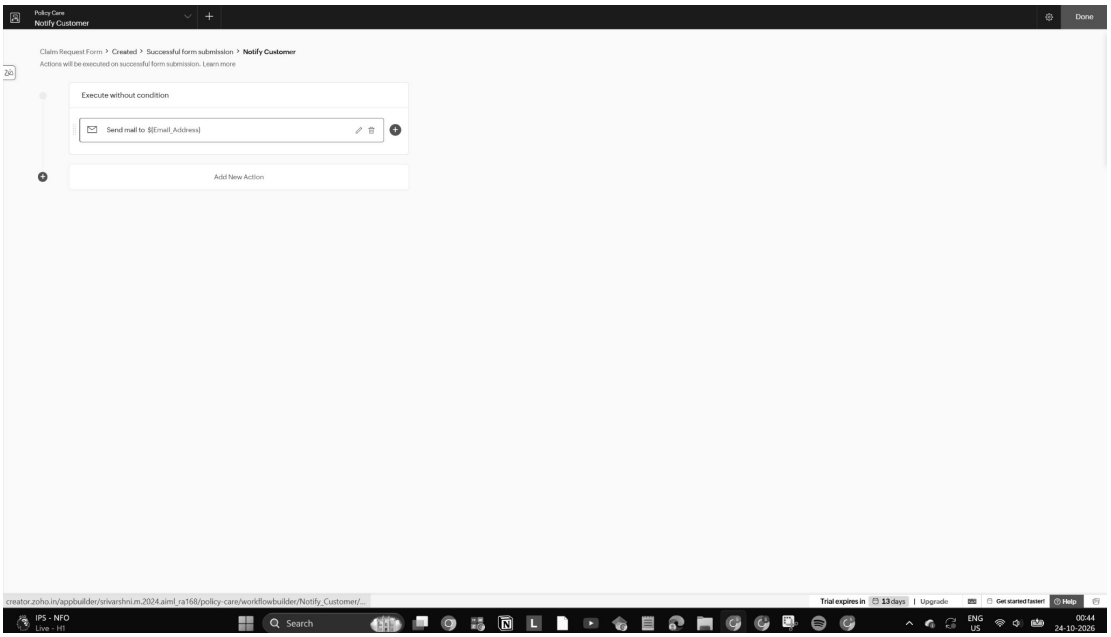

2. Create a form workflow that runs after successful claim submission and sends an acknowledgement email.

3. Create a document-reminder workflow using Deluge to check required documents and email claimants when documents are missing.

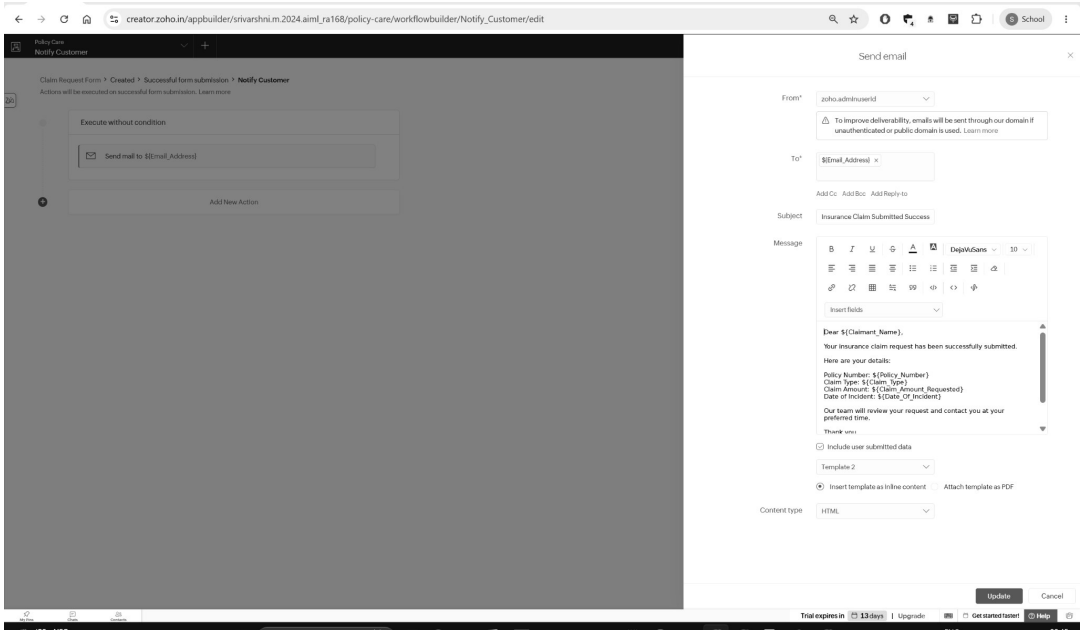

4. Save and enable the workflows, then verify them in the Workflow list.

SCREENSHOTS

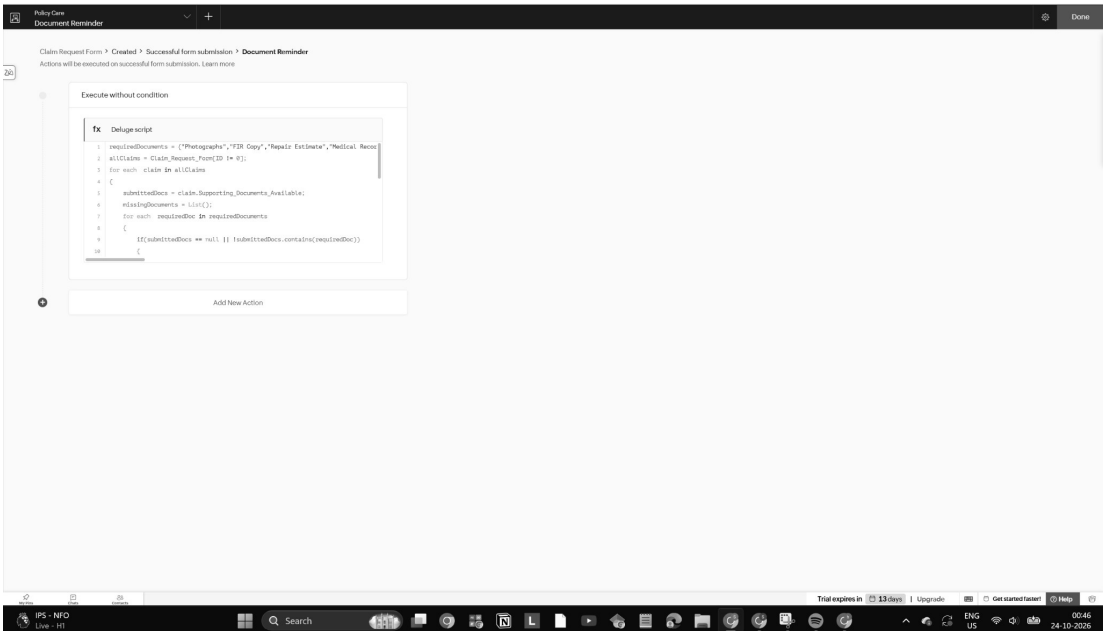

The following screenshots show the workflow configuration, reminder script, and workflow list.

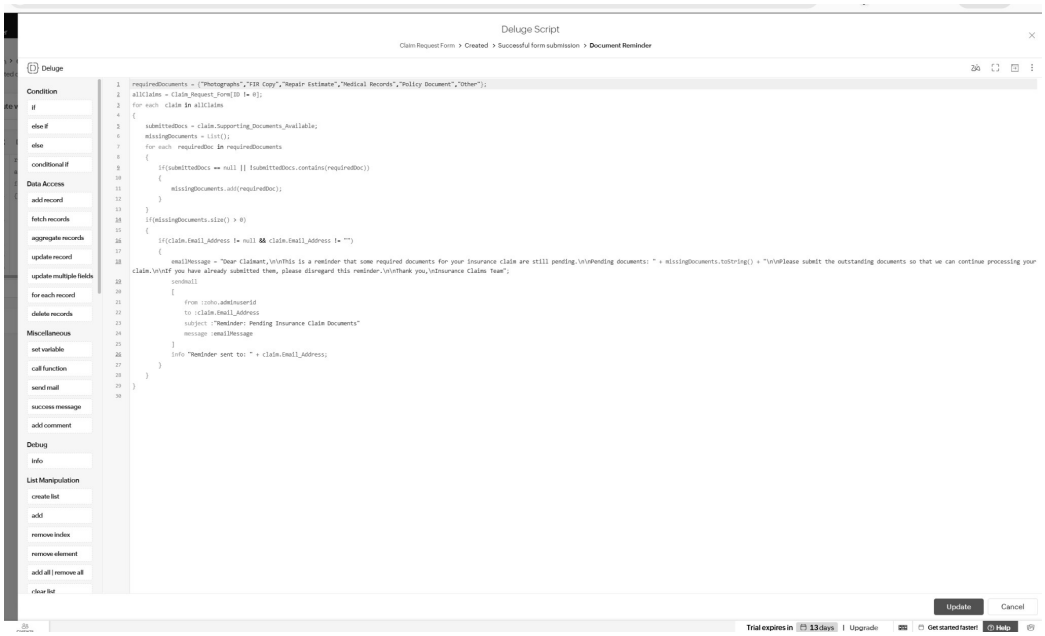

Screenshot 1: Claim Acknowledgement workflow in the Workflow Builder.

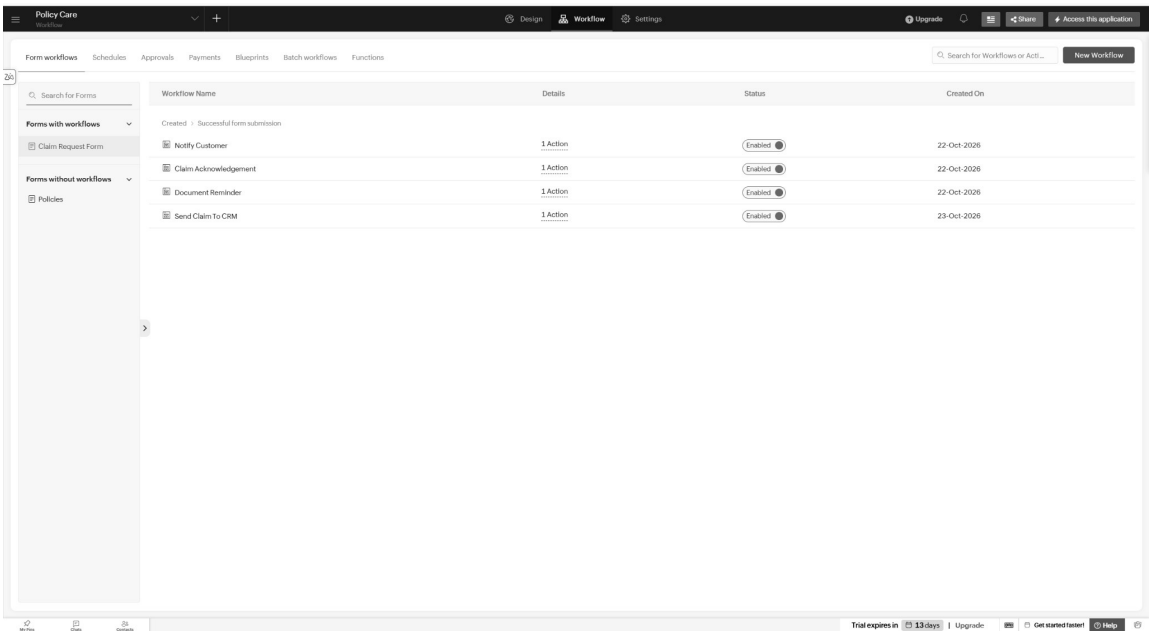

Screenshot 2: Email action configured for the claimant.

Screenshot 3: Document Reminder workflow with Deluge script.

Screenshot 4: Deluge script for checking missing claim documents and sending reminders.

Screenshot 5: Workflow list showing the configured claim automations.

RESULT

The claim acknowledgement and missing-document reminder workflows were configured in Zoho Creator using Deluge. The workflow list displays the saved automations.
