EXPERIMENT 4

Data Modelling and Form Design – Advanced Fields

Insurance Claim Request Form using Zoho Creator

1. Aim

To extend the existing Insurance Claim Request Form in Zoho Creator using all 17 Advanced Fields to support policy verification, witness capture, media uploads, settlement calculations, digital signatures, and claim tracking.

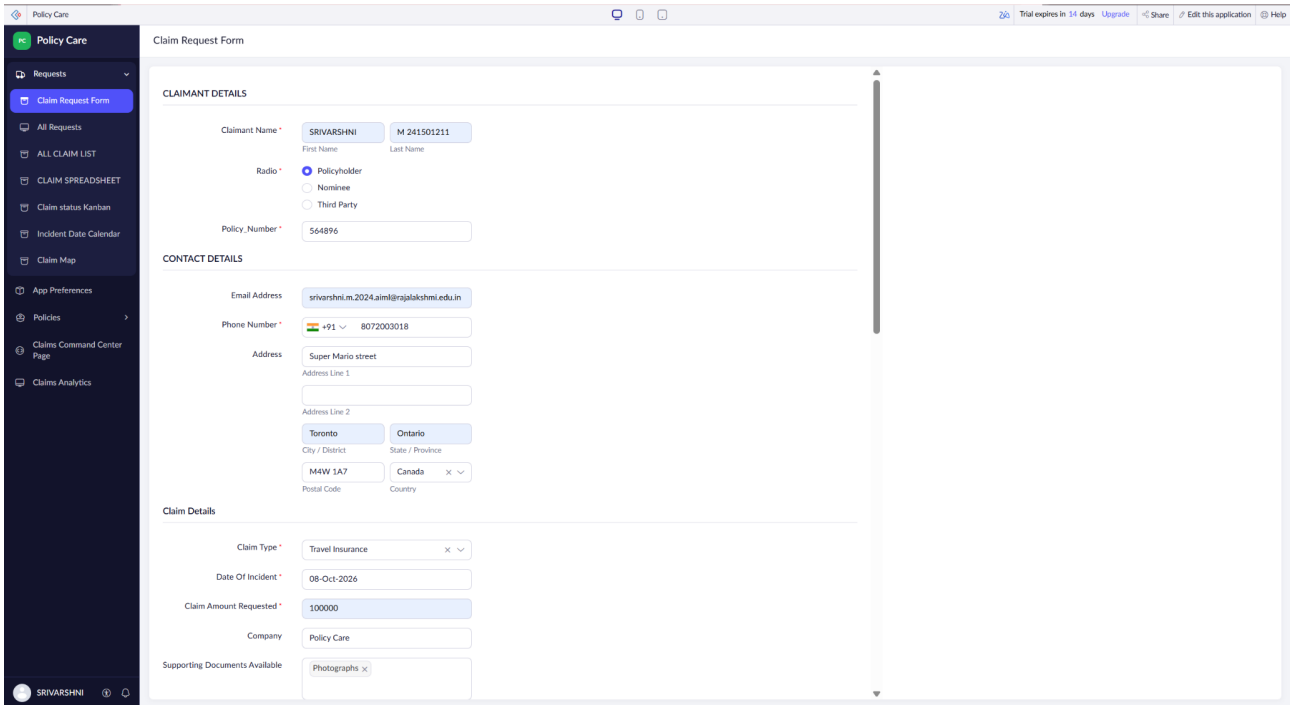

2. Software Required

• Zoho Creator
• Web browser (Google Chrome)
• Insurance Claim Request & Processing Management application

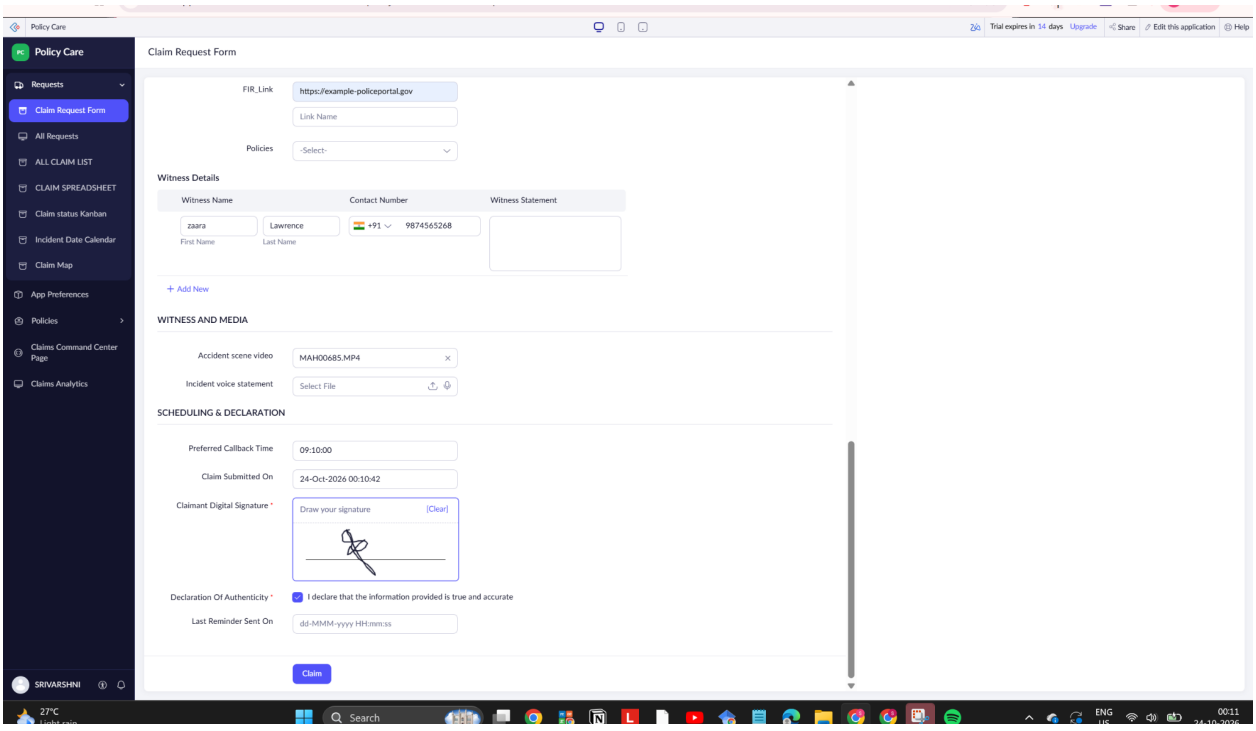

3. Procedure

1. Open Zoho Creator and select the existing Insurance Claim Request application.
2. Open **Claim_Request_Form** and add all 17 Advanced Fields.
3. Configure the Policy Lookup, Witness SubForm, file uploads, and media fields with the required validations.
4. Set up the Formula field to calculate the net payable amount after depreciation and deductible.
5. Configure the Auto Number, Date-Time, Digital Signature, and QR/Barcode fields.
6. Save and publish the form, then submit sample claim records.
7. Verify the submitted data, calculated amount, claim reference, and QR code in **Claim_Request_Report**.
8. Capture screenshots of the form, submission, and report.

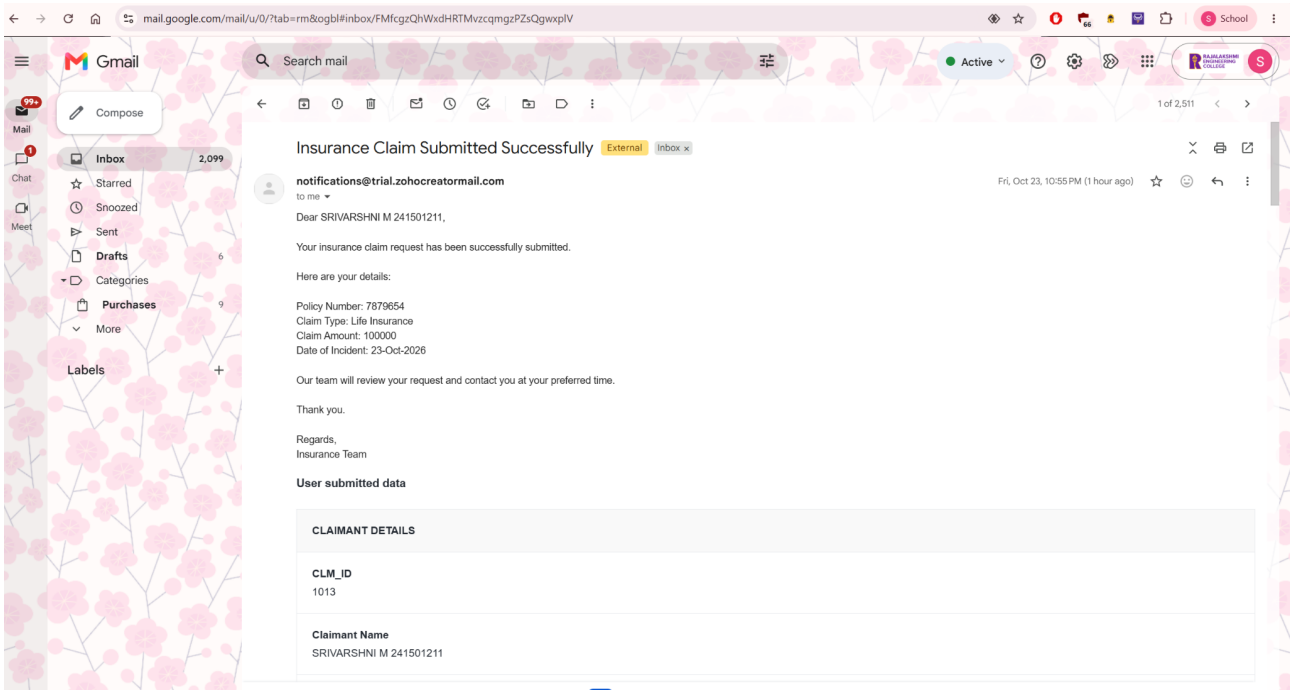

4. Screenshots

Screenshot 1 – Claim Request Form: claimant details, contact information, and claim details.

Screenshot 2 – Witness Details and Declaration: witness information, accident media, scheduling, digital signature, and declaration.

Screenshot 3 – Successful Claim Submission: email notification confirming submission and displaying claim details.

5. Result

The Insurance Claim Request Form was extended using Advanced Fields in Zoho Creator. Policy verification, witness capture, evidence uploads, settlement calculations, digital signatures, and claim tracking were configured to support efficient insurance claim processing.
