EXPERIMENT 5

Reports, Dashboards, and UI Builder

Insurance Claim Request & Processing Management – Zoho Creator

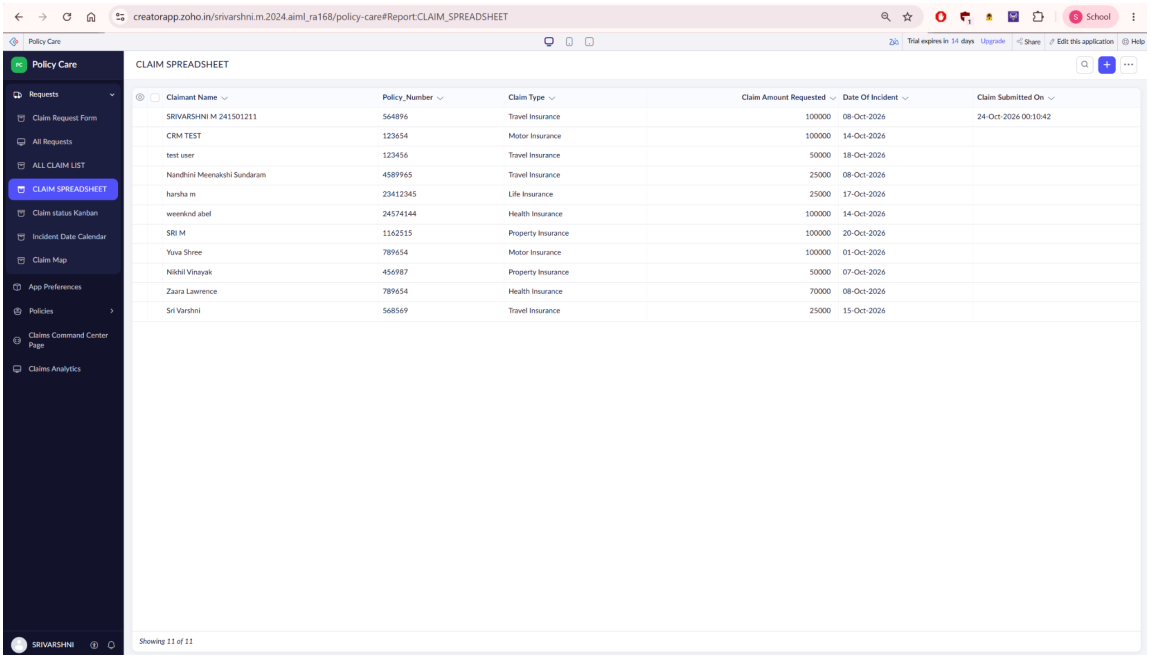

1. Aim

To create and use different reports and dashboard components in Zoho Creator to view, organize, analyze, and monitor insurance claim information.

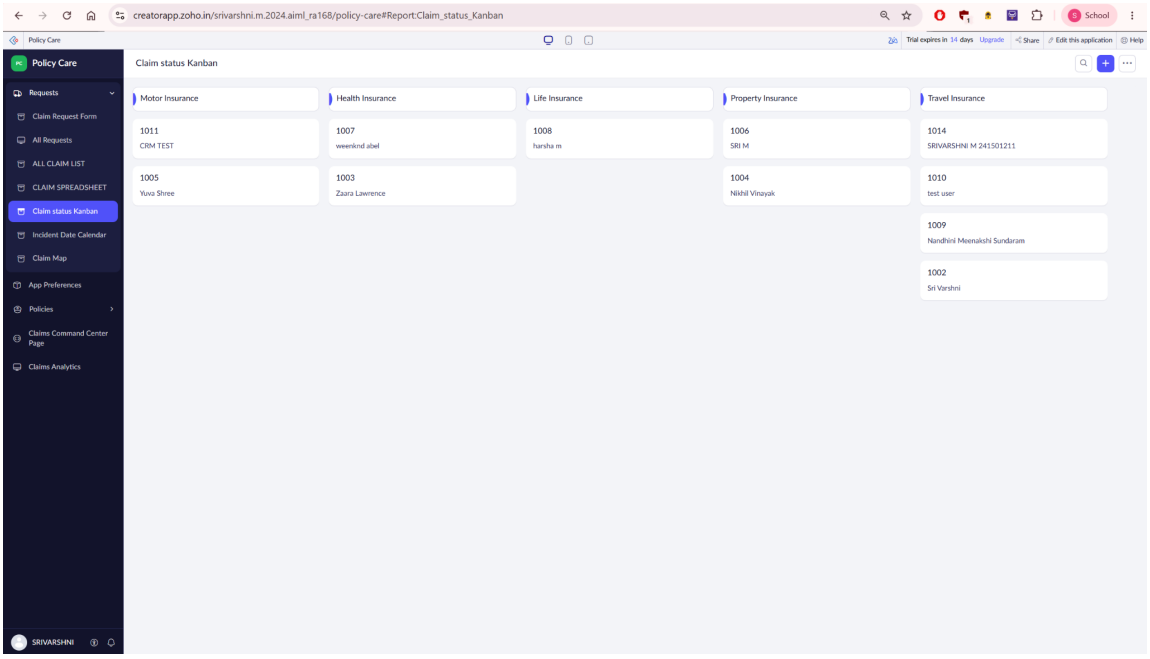

2. Procedure

1. Open the Insurance Claim application in Zoho Creator.
2. Create and configure reports such as Spreadsheet, Kanban, and Map views using claim records.
3. Build a dashboard with claim totals, charts, and a list of submitted requests.
4. Check that the reports display the available claim data correctly and capture screenshots.

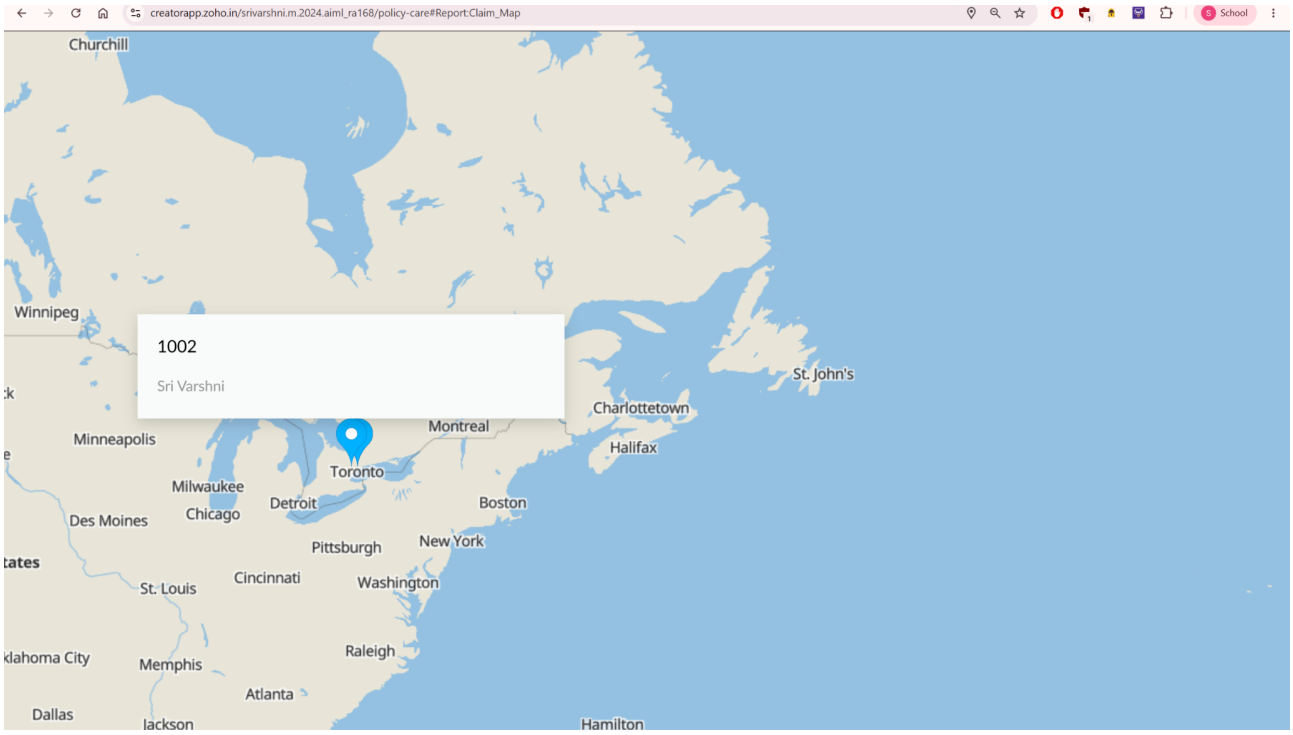

3. Screenshots

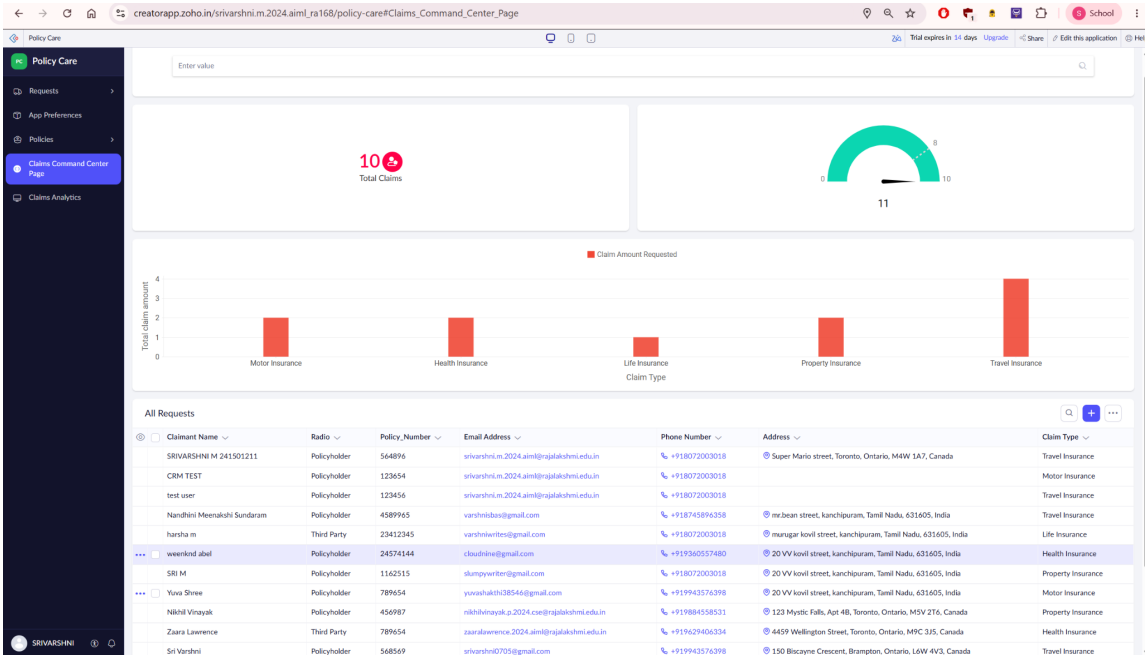

Screenshot 1 – Claim Spreadsheet: claimants, policy numbers, claim types, amounts, and incident dates.

Screenshot 2 – Claim Status Kanban: claim records grouped into insurance-type columns.

Screenshot 3 – Claim Map: a claim record displayed on the map.

Screenshot 4 – Claims Command Center Dashboard: total claims, chart, and All Requests report.

4. Result

Reports and a dashboard were used to present insurance claim information in spreadsheet, Kanban, map, chart, and summary formats, helping the team monitor claim records and review claim patterns more efficiently.
