EXPERIMENT 9

AI and Analytics Using Zia

Insurance Claim Request & Processing Management – Zoho Creator

1. Aim

To use the analytics dashboard in Zoho Creator to view and interpret insurance claim information through summary cards, charts, and visual representations, supporting quick monitoring of claim totals, amounts, types, and status.

2. Procedure

1. Log in to Zoho Creator and open the Policy Care application.

2. From the application menu, open the Claims Analytics Dashboard or the dashboard configured for claim analysis.

3. Examine the summary cards at the top of the dashboard. Note the total number of claims submitted and the total claim amount requested.

4. Review the pending, approved, and rejected claim sections to understand how claim status information is presented. Check whether the displayed values are populated.

5. Observe the “Claim Distribution by Type” pie chart. Compare the different insurance categories, such as Motor, Health, Life, Property, and Travel Insurance.

6. Examine the “Claim Status Distribution” chart to understand how claim records are grouped by their current status.

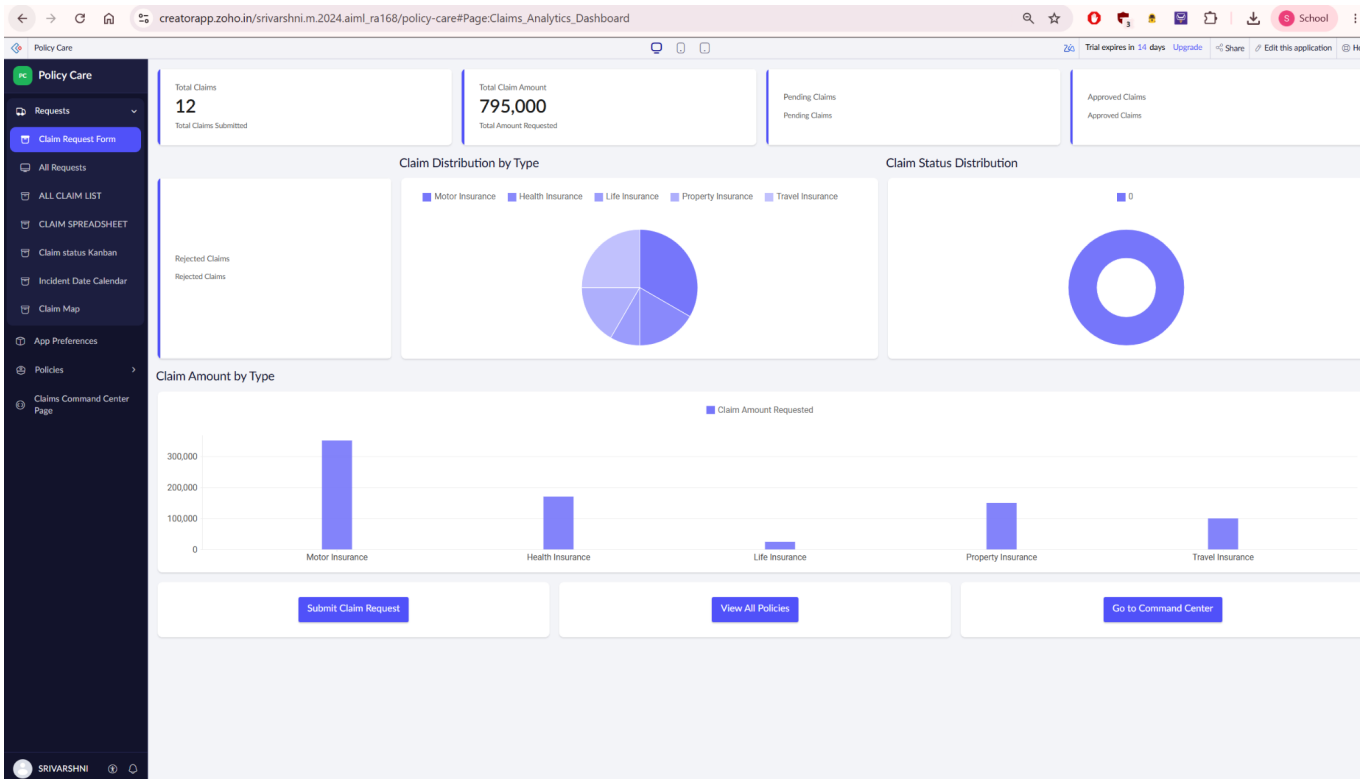

7. Review the “Claim Amount by Type” bar chart. Compare the requested claim amounts across the insurance categories and identify which category has the highest and lowest displayed amount.

8. Use the dashboard navigation options, such as “Submit Claim Request,” “View All Policies,” and “Go to Command Center,” to access related parts of the application when needed.

9. Check that the dashboard charts and summary cards reflect the available claim records. Capture a screenshot of the dashboard for the experiment record.

3. Screenshots
